

Deliverables

-Aryamann Tomar

Frontend + Backend Responsive Website :-

So, I have developed a website running locally on my computer at port 3000 which has a total of 6 web-pages :-

- Home Page ('/')
- News Page('/products')
- Individual News Page ('/products/:id')
- Add News ('/products/new')
- Edit Existing News ('/products/:id/edit')
- Contact Us ('/contact')

For Back-end I used :-

- Node.js
- Express
- MongoDB(NoSQL Database) + Mongoose(Object Data Mapper)

For Front-end I used HTML + CSS(Bootstrap Framework)

irreplaceable individuality of each person with our system for efficiency. I just couldn't tell my son that this system was the norm.

We all three quit our jobs at NTTDATA, a large corporation, and started this company. This was because we had a strong desire to change the world's standard of measurement to something that suits the individuality of each person, not just test scores. For the sake of our children, we will change this society into a school, where each individual is accepted, respected, and learned from.

We will keep challenging ourselves until we turn the whole society into a school.
